

# TELLIANT™

Intelligent Software. Delivered.

Capabilities

## Telemedicine

### Sample Telemedicine Projects

- ✔ Admin Dashboard
- ✔ Billing Software
- ✔ Clinical Workflows
- ✔ EHR Integration
- ✔ Medical Device Integrations
- ✔ Radiology Integrations
- ✔ Telemedicine Software Platforms
- ✔ Voice Recognition

### Telemedicine Solutions Demand Serious Software Development

We provide custom telemedicine apps, virtual care solutions, and platform development services for healthcare organizations and software companies.

Telemedicine platforms are mission critical and require deep expertise in data security, scaling automation, integration with legacy systems, and cross-platform device support. We ensure our solutions are interoperable, compliant, and coded with data encryption for web and mobile systems.

#### Telemedicine Trends

- ✔ Artificial Intelligence
- ✔ Internet of Things
- ✔ Augmented Reality

# Telehealth Solutions that are Convenient, Secure and Collaborative

iOS and Android users have high expectations regarding the usability of their mHealth, remote patient monitoring, IoT and e-prescription apps. Telliant focuses on the intersection of human factors, technology and business goals to build awesome and highly-used applications.

## Telemedicine and Telehealth Platforms

We develop telemedicine apps with cloud-based features for hospitals, medical practices, and other healthcare networks. Our telehealth apps development services create telemedicine applications for video-conferencing medical consultations, sharing clinical and administrative data, transmitting images, managing e-prescriptions, remotely monitoring patients, and interfacing with telesurgery equipment.

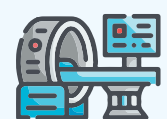

## Admin Dashboard Analytics

We create customizable admin views to manage doctor and patient profiles, registered healthcare providers and provide technical support. Analytics to provide data-driven insights and track daily interactions and transactions. Manage doctor schedules to reduce missed appointments and double bookings.

## Billing

We streamline revenue cycle management (RCM), with custom billing platforms allowing for electronic charting, accurate charge capture and management, intuitive billing analytics, and reporting as part of a digital office.

## Device & Radiology Integration

We utilize HL7 standards to network telemedicine platforms for transmitting data from EMRs/EHRs and medical imaging software.

## e-Prescription Solutions

We create software to enable doctors to create and provide digital prescriptions to patients.

## Remote Patient Monitoring

We build the apps that help monitor health status remotely by gathering telemetry data from IoT devices in real-time. Automatically update medical records with relevant information.
